PHYSICS 9702/41

Paper 4 A Level Structured Questions

May/June 2019

2 hours

Candidates answer on the Question Paper.

No Additional Materials are required.

#### **READ THESE INSTRUCTIONS FIRST**

Write your centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use an HB pencil for any diagrams or graphs.

Do not use staples, paper clips, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer **all** questions.

Electronic calculators may be used.

You may lose marks if you do not show your working or if you do not use appropriate units.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [ ] at the end of each question or part question.

## Data

speed of light in free space	$c = 3.00 \times 10^8 \mathrm{ms^{-1}}$
permeability of free space	$\mu_0 = 4\pi \times 10^{-7} \mathrm{Hm^{-1}}$
permittivity of free space	$\varepsilon_0 = 8.85 \times 10^{-12}  \mathrm{F}  \mathrm{m}^{-1}$
	$(\frac{1}{4\pi\varepsilon_0} = 8.99 \times 10^9 \mathrm{mF^{-1}})$
elementary charge	$e = 1.60 \times 10^{-19} \mathrm{C}$
the Planck constant	$h = 6.63 \times 10^{-34} \text{Js}$
unified atomic mass unit	$1 u = 1.66 \times 10^{-27} \text{kg}$
rest mass of electron	$m_{\rm e} = 9.11 \times 10^{-31}  \rm kg$
rest mass of proton	$m_{\rm p} = 1.67 \times 10^{-27}  \rm kg$
molar gas constant	$R = 8.31 \mathrm{J}\mathrm{K}^{-1}\mathrm{mol}^{-1}$
the Avogadro constant	$N_{\rm A} = 6.02 \times 10^{23}  \rm mol^{-1}$
the Boltzmann constant	$k = 1.38 \times 10^{-23} \mathrm{J}\mathrm{K}^{-1}$
gravitational constant	$G = 6.67 \times 10^{-11} \mathrm{N}\mathrm{m}^2\mathrm{kg}^{-2}$
acceleration of free fall	$g = 9.81 \mathrm{m}\mathrm{s}^{-2}$

# **Formulae**

uniformly accelerated motion	$s = ut + \frac{1}{2}at^2$ $v^2 = u^2 + 2as$
work done on/by a gas	$W = p\Delta V$
gravitational potential	$\phi = -\frac{Gm}{r}$
hydrostatic pressure	$p = \rho g h$
pressure of an ideal gas	$p = \frac{1}{3} \frac{Nm}{V} \langle c^2 \rangle$
simple harmonic motion	$a = -\omega^2 x$
velocity of particle in s.h.m.	$v = v_0 \cos \omega t$ $v = \pm \omega \sqrt{(x_0^2 - x^2)}$
Doppler effect	$f_{\rm o} = \frac{f_{\rm s} v}{v \pm v_{\rm s}}$
electric potential	$V = \frac{Q}{4\pi\varepsilon_0 r}$
capacitors in series	$1/C = 1/C_1 + 1/C_2 + \dots$
capacitors in parallel	$C = C_1 + C_2 + \dots$
energy of charged capacitor	$W = \frac{1}{2}  QV$
electric current	I = Anvq
resistors in series	$R = R_1 + R_2 + \dots$
resistors in parallel	$1/R = 1/R_1 + 1/R_2 + \dots$
Hall voltage	$V_{\rm H} = \frac{BI}{ntq}$
alternating current/voltage	$x = x_0 \sin \omega t$
radioactive decay	$x = x_0 \exp(-\lambda t)$
decay constant	$\lambda = \frac{0.693}{t_{\frac{1}{2}}}$

# Answer **all** the questions in the spaces provided.

1	(a)	Two point masses are isolated in space and are separated by a distance x.
		State an expression relating the gravitational force $F$ between the two masses to the magnitudes $M$ and $m$ of the masses. State the name of any other symbol used.
		[1]
	(b)	A spacecraft is to be put into a circular orbit about a spherical planet.
		The planet may be considered to be isolated in space. The mass of the planet, assumed to be concentrated at its centre, is $7.5 \times 10^{23}$ kg. The radius of the planet is $3.4 \times 10^6$ m.
		(i) The spacecraft is to orbit the planet at a height of $2.4 \times 10^5$ m above the surface of the planet. At this altitude, there is no atmosphere.
		Show that the speed of the spacecraft in its orbit is $3.7 \times 10^3 \mathrm{ms^{-1}}$ .

[3]

[Total: 8]

(ii) One possible path of the spacecraft as it approaches the planet is shown in Fig. 1.1.

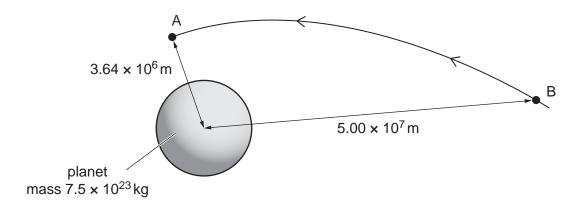

Fig. 1.1 (not to scale)

The spacecraft enters the orbit at point A with speed  $3.7 \times 10^3 \,\mathrm{m \, s^{-1}}$ .

At point B, a distance of  $5.00 \times 10^7$  m from the centre of the planet, the spacecraft has a speed of  $4.1 \times 10^3$  m s<sup>-1</sup>. The mass of the spacecraft is 650 kg.

For the spacecraft moving from point B to point A, show that the change in gravitational potential energy of the spacecraft is  $8.3 \times 10^9 \, \text{J}$ .

(c)	By considering changes in gravitational potential energy and in kinetic energy of t spacecraft, determine whether the total energy of the spacecraft increases or decreases moving from point B to point A. A numerical answer is not required.	
		[2]

2 A fixed mass of an ideal gas has volume  $210 \, \text{cm}^3$  at pressure  $3.0 \times 10^5 \, \text{Pa}$  and temperature  $270 \, \text{K}$ .

The volume of the gas is reduced at constant pressure to 140 cm<sup>3</sup>, as shown in Fig. 2.1.

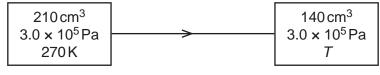

Fig. 2.1

The final temperature of the gas is T.

- (a) Determine:
  - (i) the amount of gas

(ii) the final temperature T of the gas

(iii) the external work done on the gas.

(b)	For this change in volume and temperature of the gas, the thermal energy transferred is 53 J
	Determine $\Delta U$ , the change in internal energy of the gas.

$$\Delta U = \dots J [3]$$

[Total: 10]

3 A hollow tube, sealed at one end, has a cross-sectional area A of  $24 \,\mathrm{cm}^2$ . The tube contains sand so that the total mass M of the tube and sand is  $0.23 \,\mathrm{kg}$ .

The tube floats upright in a liquid of density  $\rho$ , as illustrated in Fig. 3.1.

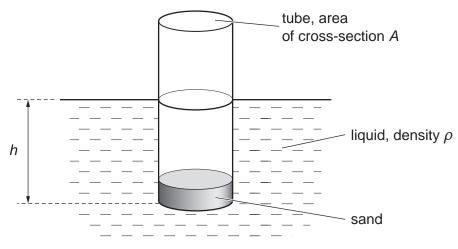

Fig. 3.1

The depth of the bottom of the tube below the liquid surface is *h*.

The tube is displaced vertically and then released. The variation with time t of the depth h is shown in Fig. 3.2.

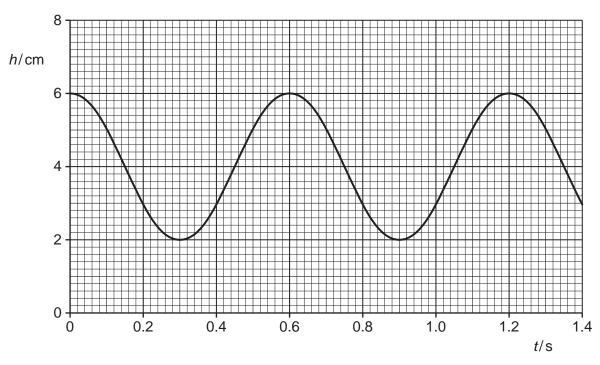

Fig. 3.2

- (a) Determine:
  - (i) the amplitude, in metres, of the oscillations

amplitude = ..... m [1]

[Total: 10]

	(ii)	) the frequency of oscillation of the tube in the liquid	d.
		fraguenav	U- (2)
		irequericy =	Hz [2]
	(iii)	) the acceleration of the tube when $h$ is a maximum	ı.
		acceleration =	ms <sup>-2</sup> [2]
/I \	<b></b>		
(b)	ine	he frequency $f$ of oscillation of the tube is given by the	e expression
		$f = \frac{1}{2\pi} \sqrt{\left(\frac{A\rho g}{M}\right)}$	
	whe	here $g$ is the acceleration of free fall.	
	Cal	alculate the density $ ho$ of the liquid in which the tube i	s floating.
		$\rho =$	kg m <sup>-3</sup> [2]
(c)	The	he oscillations illustrated in Fig. 3.2 are undamped.	In practice, the liquid does cause light
(~)		amping.	p. double, and hydra double dadde light
	On	n Fig. 3.2, draw a line to show light damping of the os	scillations for time $t = 0$ to time $t = 1/4$ s
	OII	in rig. 3.2, draw a line to show light damping of the of	Schilations for time $t = 0$ to time $t = 1.45$ . [3]

4	(a)	During the transmission of a signal, attenuation occurs and noise is picked up.
		State what is meant by:

(i)	attenuation
	[1]
(ii)	noise.
-	reference to <b>(a)(ii)</b> , explain the advantage of the transmission of the signal in digital form er than in analogue form.

(c) Part of an analogue signal is shown in Fig. 4.1.

(b)

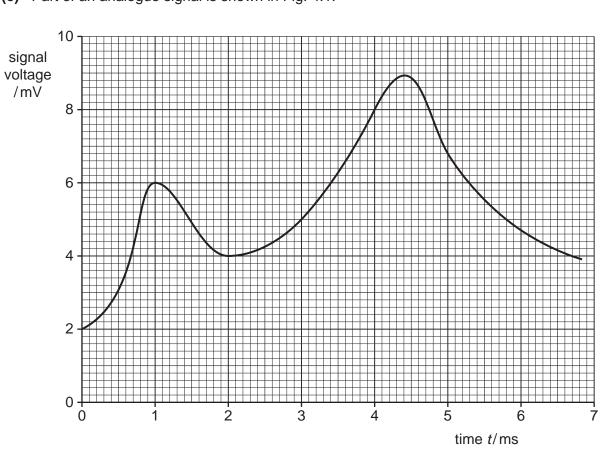

Fig. 4.1

The signal is to be transmitted in digital form.

The analogue signal is sampled at a frequency of  $1.0 \times 10^3$  Hz using an analogue-to-digital converter (ADC). The ADC produces 4-bit numbers.

The times *t* at which the analogue signal is sampled are shown in Fig. 4.2.

time t/ms	0	1.0	2.0	3.0	4.0	5.0	6.0
digital number	0010	0110	0100	0101			

Fig. 4.2

On Fig. 4.2:

- (i) for the digital number at time  $t = 3.0 \,\text{ms}$ , underline the least significant bit (LSB) [1]
- (ii) state the digital numbers corresponding to the sampling times between time  $t = 4.0 \,\text{ms}$  and time  $t = 6.0 \,\text{ms}$ .
- (d) The transmitted digital signal is converted back to an analogue signal using a digital-to-analogue converter (DAC).

On Fig. 4.3, show the variation with time t of the output levels of the DAC for time t = 0 to time  $t = 4.0 \,\text{ms}$ . Assume that there is negligible time delay in the transmission line.

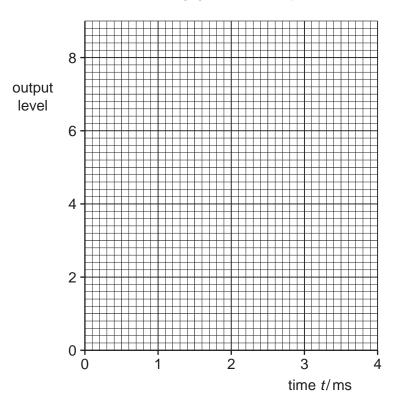

Fig. 4.3

[3]

[Total: 10]

5	(a)	State wha	it is meant	by	electric	field	strength
---	-----	-----------	-------------	----	----------	-------	----------

		[2]

**(b)** Two point charges A and B are situated a distance 15 cm apart in a vacuum, as illustrated in Fig. 5.1.

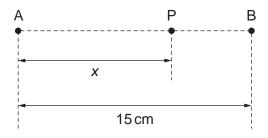

Fig. 5.1

Point P lies on the line joining the charges and is a distance *x* from charge A.

The variation with distance x of the electric field strength E at point P is shown in Fig. 5.2.

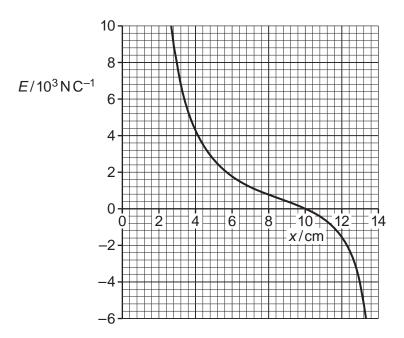

Fig. 5.2

(i)	By reference to the direction of the electric field, state and explain whether the charges A and B have the same, or opposite, signs.
	[2]
(ii)	State why, although charge A is a point charge, the electric field strength between $x = 3$ cm and $x = 7$ cm does not obey an inverse-square law.
	[1]
(iii)	Use Fig. 5.2 to determine the ratio
	magnitude of charge A
	magnitude of charge B

ratio =	[3]
ialio –	 I O

[Total: 8]

6	(a)	State two	different	functions (	of c	apacitors	in	electrical	circuits.
---	-----	-----------	-----------	-------------	------	-----------	----	------------	-----------

1	 	 
2	 	 
		[2]

**(b)** Three uncharged capacitors of capacitances  $C_1$ ,  $C_2$  and  $C_3$  are connected in series with a battery of electromotive force (e.m.f.) E and a switch, as shown in Fig. 6.1.

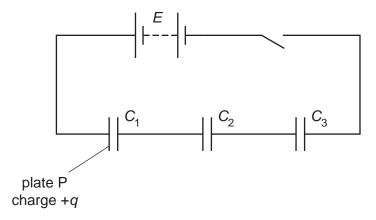

Fig. 6.1

When the switch is closed, there is a charge +q on plate P of the capacitor of capacitance  $C_1$ .

Show that the combined capacitance C of the three capacitors is given by the expression

$$\frac{1}{C} = \frac{1}{C_1} + \frac{1}{C_2} + \frac{1}{C_3}.$$

(c) A student has available four capacitors, each of capacitance  $20\,\mu\text{F}.$ 

Draw circuit diagrams, one in each case, to show how the student may connect some or all of the capacitors to produce a combined capacitance of:

(i) 60 μF

[1]

(ii) 15 μF.

[1]

[Total: 7]

7 The circuit for an inverting amplifier incorporating an ideal operational amplifier (op-amp) is shown in Fig. 7.1.

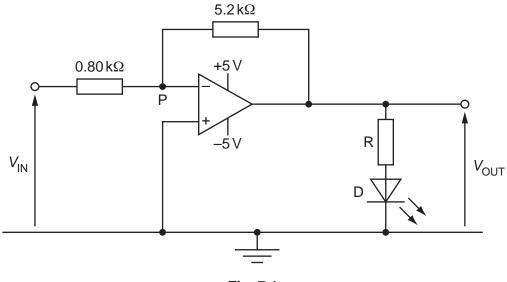

Fig. 7.1

	(a	) For	the	circuit	of	Fig.	7.1	1
--	----	-------	-----	---------	----	------	-----	---

(i)	explain why point P is known as a <i>virtual earth</i>
	[3

(ii) calculate the gain of the amplifier.

(b)	When the op-amp is saturated, the potential difference across the LED is 2.3 V.	

Calculate the minimum resistance of resistor R so that the current in the LED is limited to 30 mA.

resistance = .....  $\Omega$  [3]

[Total: 8]

A solenoid is connected in series with a battery and a switch, as illustrated in Fig. 8.1. 8

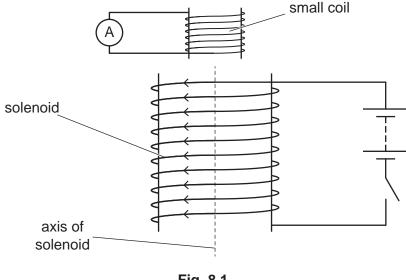

Fig. 8.1

A small coil, connected to a sensitive ammeter, is situated near one end of the solenoid.

As the current in the solenoid is switched on, there is a changing magnetic field inside the solenoid.

(a)	(1)	State what is meant by a magnetic field.	
		r.	41
			IJ

- (ii) On Fig. 8.1, draw an arrow on the axis of the solenoid to show the direction of the magnetic field inside the solenoid. Label this arrow P. [1]
- (b) As the current in the solenoid is switched on, there is a current induced in the small coil. This induced current gives rise to a magnetic field in the small coil.

(i)	State Lenz's law.

	(ii)	Use Lenz's law to state and explain the direction of the magnetic field due to the induced current in the small coil. On Fig. 8.1, mark this direction with an arrow inside the small coil.
		[3]
(c)	The	small coil has an area of cross-section $7.0 \times 10^{-4}  \text{m}^2$ and contains 75 turns of wire.
		onstant current in the solenoid produces a uniform magnetic flux of flux density 1.4 mT ughout the small coil.
	The	direction of the current in the solenoid is reversed in a time of 0.12s.
	Cal	culate the average e.m.f. induced in the small coil.
		e.m.f. =V [3]
		[Total: 10]

	clear magnetic resonance imaging (NMRI) is used to obtain diagnostic information about rnal body structures.
Stat	te, during the use of NMRI, the function of:
(a)	the large constant magnetic field
	[3]
(b)	the non-uniform magnetic field.
	[2]
	[Total: 5]

**10** A bridge rectifier contains four diodes. The output of the rectifier is connected to a resistor R, as shown in Fig. 10.1.

The variation with time *t* of the input e.m.f. *E* to the rectifier is given by the expression

$$E = 15\cos(210t)$$

where *t* is measured in seconds and *E* in volts.

The variation with time *t* of the potential difference *V* across resistor R is shown in Fig. 10.2.

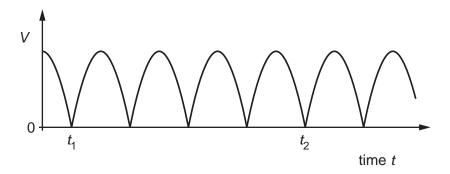

Fig. 10.2

Determine:

(a) the maximum potential difference  $V_{\rm MAX}$  across resistor R

$$V_{MAX} = \dots V [1]$$

(b)	the time interval	, to two significant figure	es, between time $t_1$	and time t	
-----	-------------------	-----------------------------	------------------------	------------	--

[Total: 4]

			State <b>three</b> pieces of evidence provided by the photoelectric effect for a particulate nature of electromagnetic radiation.

	(ii)	Determine which answer.	metals will give	rise to the emission	n of photoelectrons.	Explain your	
		2 3 (b) The	2	2	2	(b) The work function energies of some metals are shown in Fig. 11.1.    work function energy/eV	

(c)	Photons of wavelength 380 nm are incident normally on a metal surface at a rate o $7.6\times10^{14}\mathrm{s^{-1}}$ . All the photons are absorbed in the surface and no photoelectrons are emitted.
	Calculate the force exerted on the metal surface by the incident photons.

force =	N	[3]
	[Total:	11]

12	(a)	A sample of a radioactive isotope contains $N$ nuclei of the isotope at time $T$ . At time $(T + \Delta T)$ , the sample contains $(N - \Delta N)$ nuclei of the isotope. The time interval $\Delta T$ is short.			
		Use	the symbols $N$ , $\Delta N$ , $T$ and $\Delta T$ to give expressions for:		
		(i)	the average activity of the sample during the time $\Delta \mathcal{T}$		
				[1]	
		(ii)	the probability of decay of a nucleus in the time $\Delta T$		
				[1]	
		(iii)	the decay constant $\lambda$ of the isotope.		
				[1]	

**(b)** The isotope polonium-208 ( $^{208}_{84}$ Po) is radioactive and decays to form lead-204 ( $^{204}_{82}$ Pb). The nuclear equation for this decay is

$$^{208}_{84}$$
Po  $\longrightarrow$   $^{204}_{82}$ Pb +  $^{4}_{2}$ He.

Data for nuclear masses are given in Fig. 12.1.

	mass/u
<sup>4</sup> <sub>2</sub> He	4.002603
<sup>204</sup> <sub>82</sub> Pb	203.973043
<sup>208</sup> <sub>84</sub> Po	207.981245

Fig. 12.1

- (i) Determine, for the decay of one nucleus of polonium-208:
  - 1. the change, in u, of the mass

2.	the total energy,	in n.l	released
<b>-</b>	tilo total olloldy,	III PU,	i Cicasca.

	energy =pJ [3]
(ii)	The polonium-208 nucleus is initially stationary. The initial kinetic energy of the $^4_2$ He nucleus ( $\alpha$ -particle) is found to be less than the energy calculated in (i) part 2.
	Suggest <b>two</b> possible reasons for this difference.
