Paper 5 Practical Test

May/June 2012

1 hour 15 minutes

Candidates answer on the Question Paper

Additional Materials: As listed in the Confidential Instructions

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name in the spaces at the top of the page.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

For Examiner's Use

This document consists of 10 printed pages and 2 blank pages.

1 In this experiment, you will investigate the effect of a load on a rule attached to a forcemeter.

For Examiner's Use

Carry out the following instructions, referring to Fig. 1.1. The apparatus has been set up for you.

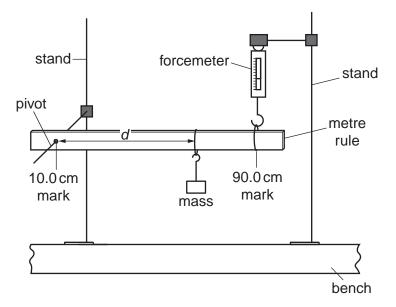

Fig. 1.1

The rule is pivoted near one end. Near the other end, the rule is attached to a forcemeter. A mass is hanging from the rule at a distance *d* from the pivot.

- (a) (i) Move the mass to a distance $d = 70.0 \,\mathrm{cm}$ from the pivot. Record the distance d in Table 1.1.
 - (ii) Adjust the position of the forcemeter by raising or lowering the clamp until the rule is horizontal and the forcemeter is vertical. Measure and record in the table the reading *F* on the forcemeter.

Table 1.1

d/	F/

- (iii) Repeat steps (i) and (ii) using d values of 60.0 cm, 50.0 cm, 40.0 cm, 30.0 cm, 20.0 cm and 10.0 cm.
- (iv) Complete the column headings in the table.

[5]

© UCLES 2012 0625/53/M/J/12

(b)	A st	tudent thinks that F is directly proportional to d .	For
	(i)	Suggest the graph that you could plot to test this idea. You are not asked to plot the graph.	Examiner's Use
		againstagainst	
	(ii)	State the properties of the line that would indicate that F is directly proportional to d .	
		1	
		2	
(c)		pirit level is a piece of equipment that is placed on a surface to check whether the face is horizontal.	
		ggest why a spirit level balanced on the rule is not suitable for checking whether the is horizontal in this experiment.	
		[1]	
(d)	Des	scribe briefly how you checked that the rule was horizontal. You may draw a diagram.	
		[1]	
		[Total: 10]	

2 In this experiment, you will investigate the rate of cooling of water.

For Examiner's Use

You are provided with a supply of hot water. Carry out the following instructions referring to Fig. 2.1.

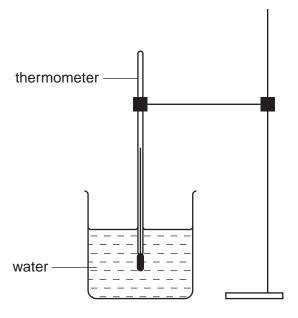

Fig. 2.1

(a) Measure and record room temperature $\theta_{\rm R}$.

$$\theta_{R}$$
 =[1]

(b) (i) Pour approximately 200 cm³ of the hot water supplied into the beaker. Place the thermometer in the beaker of water.

Measure the temperature θ of the water. Record θ in Table 2.1 at time t = 0 s.

(ii) Start the stopclock and record in the table the temperature of the water at $30 \, \text{s}$ intervals until you have a total of six values up to time $t = 150 \, \text{s}$.

Table 2.1

t/s	θ/°C

[2]

"	•1	Plot a graph	of $\theta/\circ C$	(veavie)	against t/s	(v-avic)
"	•)	Fibl a graph	010/0	(у-аліб)	ayanısı 1/ s	(<i>x</i> -axio <i>)</i> .

[5]

(d) As you read these words, this experiment is being carried out by candidates in many different countries, using identical apparatus.

Suggest two differences in the conditions in the various laboratories that might lead to different graphs.

1			
1	 	 	

[Total: 10]

3 In this experiment, you will investigate resistor combinations in circuits.

For Examiner's Use

Carry out the following instructions referring to Fig. 3.1.

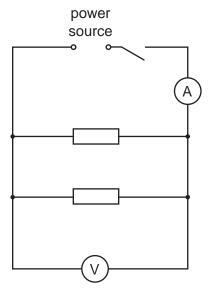

Fig. 3.1

(a) (i) Switch on. Measure and record the potential difference V_1 across the resistors and the current I_1 in the circuit. Switch off.

(ii) Calculate the total resistance $R_{\rm P}$ of the combination of the two resistors arranged in parallel, using the equation $R_{\rm P} = \frac{V_1}{I_1}$.

$$R_{\mathsf{P}}$$
 =

(iii) Calculate $4R_{\rm P}$.

$$4R_{p} = \dots [2]$$

- **(b)** Rearrange the circuit so that the two resistors are connected in **series** and the voltmeter is connected to measure the potential difference across **both** resistors.
 - (i) Switch on. Measure and record the potential difference V_2 across the resistors and the current I_2 in the circuit. Switch off.

(ii)	Calculate the total resistance $R_{\rm S}$ of the combination of the two resistors arranged
	in series, using the equation $R_S = \frac{V_2}{I_2}$.

For Examiner's Use

$R_{\varsigma} =$	 	
0		[2]

(c) Theory suggests that $R_{\rm S}$ = $4R_{\rm P}$ if the two resistors have the same value.

State whether your results indicate that the two resistors have the same value. Justify your answer with reference to the results.

statement	
justification	
	[1]

- (d) Using the circuit described in (b), replace the two series resistors with the two lamps.
 - (i) Draw a circuit diagram of the new circuit using standard symbols.

[2]

(ii) Switch on. Measure and record the potential difference V_3 across the lamps and the current I_3 in the circuit. Switch off.

(iii) Calculate the total resistance $L_{\rm S}$ of the combination of the two lamps arranged in series using the equation $L_{\rm S} = \frac{V_3}{I_3}$.

(e)	Rea	arrange the circuit to that shown in Fig. 3.1 but with the lamps in place of the resistors.	For Examiner's
	(i)	Switch on. Measure and record the potential difference V_4 across the lamps and the current I_4 in the circuit. Switch off.	Use
		$V_4 = \dots$	
		<i>I</i> ₄ =	
	(ii)	Calculate the total resistance $L_{\rm P}$ of the combination of the two lamps arranged in	
		parallel using the equation $L_{\rm P} = \frac{V_4}{I_4}$.	
		<i>L</i> _P =	
	(iii)	Calculate 4 <i>L</i> _P .	
		$4L_{\rm P} = \dots $ [1]	
(f)	A student suggests that using lamps instead of resistors changes the conditions of the experiment and that $4L_{\rm P}$ will not be equal to $L_{\rm S}$ because of a heating effect.		
		m your own observations, state one piece of evidence that supports the student's gestion that there is a heating effect. You should not do any further calculations.

BLANK PAGE

4 In this experiment, you will determine the refractive index of the material of a transparent block.

For Examiner's Use

Carry out the following instructions, referring to Fig. 4.1.

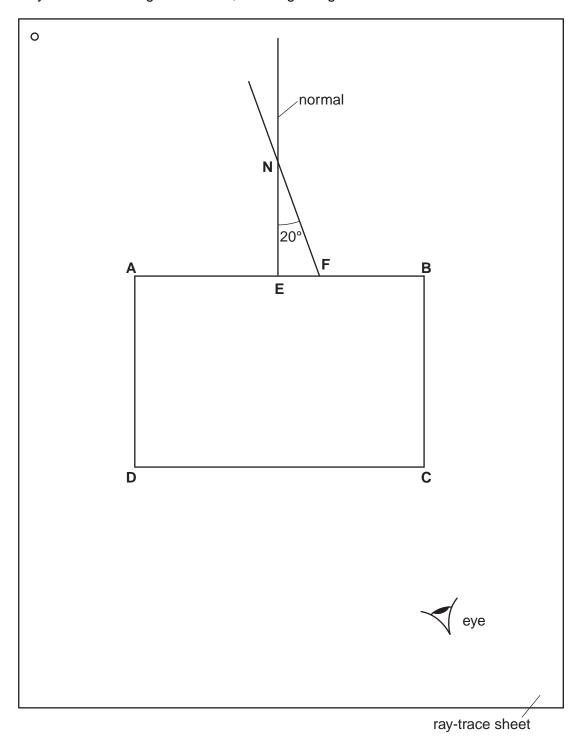

Fig. 4.1

- (a) Place the transparent block, largest face down, on the ray-trace sheet supplied. The block should be approximately in the middle of the paper. Draw the outline of the block ABCD.
- (b) Remove the block and draw a normal at the centre of side AB. Label the point E where the normal crosses AB. Mark a point N on the normal 4.0 cm from E and outside the block as shown in Fig. 4.1.

© UCLES 2012 0625/53/M/J/12

(c)	Draw a line NF to the right of the normal and at an angle of 20° to the normal as shown in Fig. 4.1. F is the point where the line meets AB . Measure and record the length <i>a</i> of the line NF .	For Examiner's Use
	a =[1]	
(d)	Extend the line NF beyond N and place the paper on the pin board.	
(e)	Place two pins P_1 and P_2 on the line through ${\bf F}$ and ${\bf N}$, placing one pin close to ${\bf F}$.	
(f)	Replace the block and observe the images of P_1 and P_2 through side CD of the block so that the images of P_1 and P_2 appear one behind the other.	
	Place two pins P_3 and P_4 between your eye and the block so that P_3 and P_4 and the images of P_1 and P_2 , seen through the block, appear one behind the other.	
	Mark the positions of P ₁ , P ₂ , P ₃ and P ₄ . Remove the block.	
(g)	Draw a line joining the positions of $\rm P_3$ and $\rm P_4$. Continue the line until it meets CD . Label this point G .	
(h)	Draw the line GF and continue it until it meets the normal. Label this point H .	
(i)	Measure and record the length b of the line FH .	
	<i>b</i> =[1]	
(j)	Calculate the refractive index <i>n</i> of the material of the block, using the equation $n = \frac{b}{a}$.	
	<i>n</i> =[2]	
(k)	Repeat steps (c) – (j) but with the line from $\bf N$ drawn at 25° to the left of the normal.	
	a =	
	<i>b</i> =	
	<i>n</i> =[1]	
Tie	your ray trace into this Booklet between pages 10 and 11. [5]
