PHYSICS 0625/63

Paper 6 Alternative to Practical

May/June 2011

1 hour

Candidates answer on the Question Paper.

No Additional Materials are required.

READ THESE INSTRUCTIONS FIRST

Write your Centre number, candidate number and name on all the work you hand in.

Write in dark blue or black pen.

You may use a pencil for any diagrams, graphs or rough working.

Do not use staples, paper clips, highlighters, glue or correction fluid.

DO NOT WRITE IN ANY BARCODES.

Answer all questions.

At the end of the examination, fasten all your work securely together.

The number of marks is given in brackets [] at the end of each question or part question.

This document consists of 10 printed pages and 2 blank pages.

1 The IGCSE class is investigating the loading of a metre rule.

Fig. 1.1 shows the apparatus.

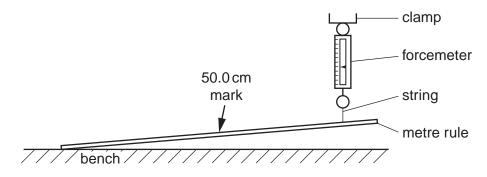

Fig. 1.1

(a) A metre rule is attached at one end to the bench. The other end is supported by a forcemeter.

A student records in Table 1.1 the reading *F* on the forcemeter.

He places a 100 g mass on the rule at the 50.0 cm mark and records in the table the value of the reading *F* on the forcemeter. He repeats the procedure using masses of 200 g, 300 g, 400 g and 500 g. The forcemeter readings are shown in the table.

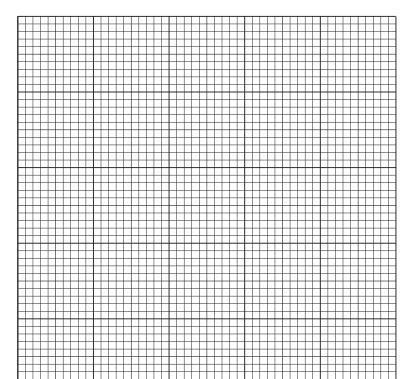

Write the mass values in the table.

Table 1.1

m/g	F/N
0	1.10
	1.85
	2.20
	2.95
	3.50
	4.20

[1]

(b) Plot a graph of F/N (*y*-axis) against m/g (*x*-axis).

For Examiner's Use

[5]

(c) Use the graph to find the value of F when $m = 375 \, \text{g}$. Show clearly on the graph how you obtained the result.

	-	[3]	1
г	=	Z	ı

(d) The forcemeter shows a reading when no mass has been added to the metre rule. Assuming that the forcemeter has no zero error, suggest a reason for the reading.

2 The IGCSE class is investigating the rate of cooling of water.

Fig. 2.1 shows the apparatus.

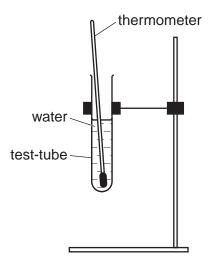

Fig. 2.1

(a) Record room temperature $\theta_{\rm R}$ as shown on the thermometer in Fig. 2.2.

Fig. 2.2

$$\theta_{\mathsf{R}}$$
 =[1]

(b) A student pours hot water into the test-tube until it is about two thirds full of water and places the thermometer in the water. When the thermometer reading stops rising, she measures the temperature θ of the water and records θ in Table 2.1 at time t=0. She starts a stopclock and records in the table the time t and the temperature θ of the water every 30 s. She removes the thermometer and pours away the water from the test-tube. She then wraps cotton wool insulation round the test-tube and repeats the procedure.

For Examiner's Use

- (i) Complete the time and temperature column headings in the table.
- (ii) Complete the time column in the table.

Table 2.1

t/	tube without cotton wool θ /	tube with cotton wool $\theta/$
0	79	80
	65	67
	58	60
	55	57
	53	56
	52	55
	51	54

[2]

(C)	State in which experiment the cooling is more rapid. Justify your answer by reference to the readings.
	experiment
	justification
	[2]
(d)	If these experiments were to be repeated in order to check the results, it would be important to control the conditions. Suggest two conditions that should be controlled.
	1
	2[2]
(e)	Suggest two alternative insulating materials that could be used in place of cotton wool.
	1
	2[2]
	[Total: 9]

3 The IGCSE class is investigating the resistance of a wire.

Fig. 3.1 shows the circuit.

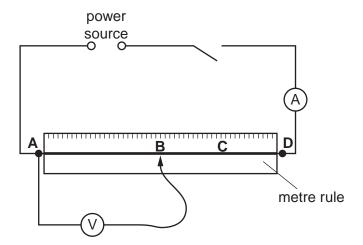

Fig. 3.1

(a) A student measures the current I in the circuit and the p.d. V across the section of wire AB. He records the length I of the wire AB. He repeats the procedure with the voltmeter connected across section AC of the wire and then with the voltmeter connected across section AD of the wire. The readings are shown in Table 3.1.

Table 3.1

voltmeter connected across	1/	1/	V/	R/
AB	50	0.21	0.9	
AC	75	0.22	1.4	
AD	100	0.20	1.7	

- (i) Calculate the values of resistance R for each length of wire using the equation $R = \frac{V}{I}$. Enter the values in the table.
- (ii) Complete the column headings in the table.

[3]

(b) It is suggested that the resistance across **AB** should be half the resistance across **AD**. State whether the results support this suggestion and justify your answer with reference to the results.

,			
iustification	 	 	
statement	 	 	

(c) It is known that changes in temperature affect the resistance of the wire. State how you can limit the temperature changes when carrying out this experiment.

ray

(d)	The (i)	e student wishes to use a lower current so he adds a variable resistor to the circuit. Draw the standard circuit symbol for a variable resistor.	For Examiner's Use
	(ii)	On Fig. 3.1, mark with an X a suitable position in the circuit for the variable resistor. [2]	

4 The IGCSE class is investigating the refraction of light through a transparent block.

Fig. 4.1 shows a student's ray trace sheet. It is not drawn full size.

For Examiner's Use

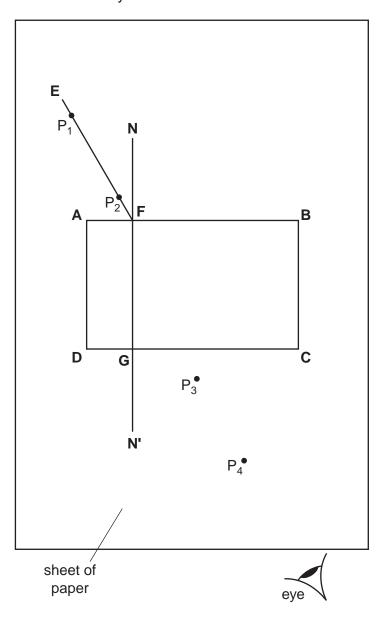

Fig. 4.1

(a) The student places a transparent block, largest face down, on a sheet of plain paper and draws the outline **ABCD** of the block. She removes the block and draws the normal **NN'** to side **AB**. She then draws the line **EF** at an angle of incidence *i*.

On Fig. 4.1, measure the angle of incidence i.

 $i = \dots [1]$

For Examiner's Use

(b)	She of P eye	places two pins P_1 and P_2 on line EF , as shown in Fig. 4.1, and replaces the block. To observe the images of P_1 and P_2 through side CD of the block so that the images P_1 and P_2 appear one behind the other. She places two pins P_3 and P_4 between her and the block so that P_3 , P_4 and the images of P_1 and P_2 , seen through the block, ear one behind the other.
	(i)	On Fig. 4.1, draw a line joining the positions of $\rm P_3$ and $\rm P_4$. Continue the line until it meets CD . Label this point H .
	(ii)	Measure and record the length a of the line GH .
		a =
	(iii)	Draw the line HF .
	(iv)	Measure and record the length <i>b</i> of the line HF .
		b =
	(v)	Calculate the refractive index n of the material of the block using the equation $n = \frac{b}{2a}$.
		<i>n</i> =[5]
(c)	(i)	Suggest how far apart you would place the pins P_3 and P_4 if you were carrying out this experiment using a ray trace sheet the same size as this page.
		suggested distance =
	(ii)	Give a reason for your answer to (i).
		reason
		[2]
(d)	by ι Ass	s experiment may be carried out using a ray of light, produced by a ray box, instead of using optical pins. A student suggests that the ray box method will be more accurate. uming that the experiment is carried out with care, suggest one possible cause of ccuracy using the optical pin method and one using the ray box method.
	opti	cal pin method
	rav	box method

5 (a) An IGCSE student is investigating the relationship between the extension of a metal wire of unstretched length 3.000 m, and the load hung on the wire. He has a set of 10 N weights.

For Examiner's Use

Consider the readings that the student should take and write appropriate column headings, with units, in Table 5.1.

Table 5.1

0	3.000	0
20	3.001	0.001
40	3.002	0.002
60	3.003	0.003
80	3.010	0.010

[2]

(b)	The student decides to repeat the experiment using a wire made of a different metal in
	order to study how the extension may be affected by the metal from which the wire is
	made. To make a fair comparison, other variables must be kept constant. Suggest two
	variables that the student should keep constant.
